15 SHEN-CHIA WONG; and
16 CHENG SUN LAN,

17 Plaintiffs,

18 v.

19 WISTRON CORPORATION;
20 WISTRON INFOCOMM (TEXAS)
21 CORPORATION; and
22 WISTRON INFOCOMM TECHNOLOGY
23 (AMERICA) CORPORATION,

24 Defendants.

Civil Action No.:

CV11 02127 DMG (JCx)

**COMPLAINT FOR PATENT
INFRINGEMENT**

DEMAND FOR JURY TRIAL

25 This is an action brought by Plaintiffs Holland
26 Electronics, LLC, Shen-Chia Wong and Cheng Sun Lan (collectively
27 "Plaintiffs" or "Holland") against Wistron Corporation, Wistron
28 InfoComm (Texas) Corporation, and Wistron InfoComm Technology
(America) Corporation (collectively "Defendants" or "Wistron").

//

//

1 **I. THE PARTIES**

2 1. Plaintiff Holland Electronics, LLC is a California
3 Limited Liability Company having its principal place of business
4 at 2935 Golf Course Drive, Ventura, California 93003.

5 2. Plaintiff Shen-Chia Wong is a citizen of Taiwan having
6 a place of business at No. 10, Lane 121, Li-Der Rd., Pioto
7 District, Taipei Taiwan R.O.C.

8 3. Plaintiff Cheng Sun Lan is a citizen of Taiwan having
9 a place of business at No. 10, Lane 121, Li-Der Rd., Pioto
10 District, Taipei Taiwan R.O.C.

11 4. Upon information and belief, Defendant Wistron
12 Corporation is a Taiwanese corporation having a principal place
13 of business at 21F, 88, Sec. 1, Hsin Tai Wu Road, Hsichih,
14 Taipei Hsien 221, Taiwan, R.O.C. Upon further information and
15 belief, Defendant Wistron Corporation is conducting business in
16 the state of California and this judicial district.

17 5. Upon information and belief, Defendant Wistron
18 InfoComm (Texas) Corporation is a corporation organized and
19 existing under the laws of the state of Texas, having a
20 principal place of business at 4051 Freeport Parkway, Suite 200,
21 Grapevine, TX 76051. Upon further information and belief,
22 Defendant Wistron InfoComm Technology (Texas) Corporation is
23 conducting business in the state of California and this judicial
24 district.

25 6. Upon information and belief, Defendant Wistron
26 InfoComm Technology (America) Corporation is a Texas corporation
27 organized and existing under the laws of the state of Texas,
28 having a principal place of business at 800 Parker Square Suite

1 285A, Flower Mount, Texas 75028. Upon further information and
2 belief, Defendant Wistron InfoComm Technology (America)
3 Corporation is conducting business in the state of California
4 and this judicial district.

5 7. Plaintiff Holland Electronics, LLC provides products
6 including coaxial cable connector products to the domestic cable
7 and satellite television industry. In particular, Holland
8 Electronics, LLC sells coaxial cable connectors covered by U.S.
9 Pat. No. 5,667,409 ("the '409 patent"). Plaintiffs Shen-Chia
10 Wong, and Cheng Sun Lan are the inventors and owners of the '409
11 patent and have granted Holland Electronics, LLC the exclusive
12 right to practice the patent.

13 8. Defendants Wistron sell competing coaxial cable
14 connectors to the domestic cable and satellite television
15 industry. On information and belief, Wistron sells coaxial
16 cable connectors that are covered by the '409 patent.

17 **II. JURISDICTION AND VENUE**

18 9. This action arises under the Patent Laws of the United
19 States, 35 U.S.C. §§ 100, *et seq.*

20 10. This Court has subject matter jurisdiction pursuant to
21 28 U.S.C. § 1331, 28 U.S.C. § 1338(a).

22 11. Defendants are subject to the personal jurisdiction of
23 this Court.

24 12. Venue is proper in this Judicial District pursuant to
25 28 U.S.C. § 1391(b), (c) and 1400(b).

26 //

27 //

28 //

1 19. Defendants' infringement of the '409 patent is causing
2 irreparable harm to Holland, for which there is no adequate
3 remedy at law. Defendants' infringement will continue, and will
4 continue to cause irreparable harm to Holland, unless
5 Defendants' infringement is enjoined by this Court.

6 20. Holland is informed and believes that Defendants'
7 infringement of the '409 patent was and is willful and
8 deliberate, entitling Holland to enhanced damages under 35
9 U.S.C. § 284 and attorneys' fees and non-taxable costs under 35
10 U.S.C. § 285.

11 **PRAYER FOR RELIEF**

12 Wherefore, Holland prays for judgment and seeks relief as
13 follows:

14 A. A judgment that Defendants have infringed the '409
15 patent;

16 B. A permanent injunction against further infringement of
17 the '409 patent, including an injunction against direct
18 infringement, contributory infringement, and induced
19 infringement;

20 C. An award of damages for Defendants' infringement of
21 the '409 patent;

22 D. A trebling of the award of damages under 35 U.S.C. §
23 284, or such other enhancement of the award of damages that the
24 Court deems appropriate;

25 E. A declaration that Defendants' infringement of the
26 '409 patent is willful, and that this is an exceptional case
27 under 35 U.S.C. § 285;

28 //

1 F. An award of attorneys' fees and non-taxable costs
2 under 35 U.S.C. § 285 on account of Defendants' willful
3 infringement;

4 G. An award of taxable costs; and,

5 H. Such other and further relief as this Court may deem
6 just and proper.

both of No. 10, Lane 121, Li-Der Rd.,
Peito District, Taipei, Taiwan

Primary Examiner—David L. Pirlot
Attorney, Agent, or Firm—Pro-Techtor International

[57] **ABSTRACT**

An improved structure for the connector of a coaxial cable ensures that there are multiple contact points between the contact component and the central wire of the coaxial cable. The connector has holes on the top and bottom of the two ends of the contact component. The material of the holes is punched inward but is not removed from the tube forming the contact component such that a pair of inclined planes extend toward the interior of each end of the tube. One pair of insulation components which slip on the inside of the connector body join with one end of the contact component to fix and to support the contact component in order to increase the quality of transmission. The connector can be used in a specific range of central wire for cable that allows larger current flows, therefore being suitable for use in a combination of TV and telephone as well as with the current cable TV system.

STRUCTURE IMPROVEMENT FOR THE CONNECTOR OF COAXIAL CABLE

BACKGROUND OF THE INVENTION

1. Field of the Invention

The present invention relates to an improved structure for a connector of a coaxial cable which is constructed using a stick-like contact component and an insulation component in order to reduce the power loss and to adapt to different diameter conduits (diameter from 0.5 mm to 1.2 mm) of coaxial cable.

2. Description of the Prior Art

In cable television systems, such as standard cable systems, closed-circuit TV, and a central antenna TV system, a coaxial cable is required to transmit signals. Consumers desire higher quality TV reception and the quality of the coaxial cable connector affects the quality of TV reception directly. As shown in FIG. 1, the inner structure of a conventional coaxial cable connector 60 has a flat contact spring 61. When the central wire of the cable is inserted into the connector, the structure only has two points (top and bottom) of contact jaw leading to inefficient contact and power loss. The standard connector also cannot be used in high frequency receiving. When combining both cable TV and telephone, the central wire needs to bear a larger current because the cable receives input signals for TV (such as TV program selection and TV shopping item selection) and provides the current for the phone.

Some manufacturers try to solve the above defects using the formula $Z_0 = (138/\sqrt{\epsilon}) \log_{10}(D/d)$ to design the structure of a round pin for the connector; wherein Z_0 = impedance match, ϵ = material dielectric constant, D = large diameter, d = small diameter. It can be inferred from the formula that a circle will provide the best impedance match.

In a television cable system, the main line and branch line use different coaxial cable; thus, the inventor of the present invention seeks to solve the problem of power loss in a conventional connector, to solve the problem of impedance matching at high frequency, and to provide a connector that is applicable to all cables. Also, the present invention provides better contacting, allowing larger current to pass that will not create sparks during transmission, and will therefore not affect the communication quality of telephone.

SUMMARY OF THE INVENTION

A main purpose of the present invention is to provide an improved structure for the connector of a coaxial cable which ensures that there are multiple contact points between the contact component and the central wire of the coaxial cable. The connector has holes on the top and bottom of the two ends of the contact component. The material of the holes is punched inward but is not removed from the tube forming the contact component such that a pair of inclined planes extend toward the interior of each end of the tube. One pair of insulation components which slip on the inside of the connector body join with one end of the contact component to fix and to support the contact component in order to increase the quality of transmission.

A secondary purpose of the present invention is to provide the above structure which can be used in a specific range of central wire for cable that allows larger current flows, and also has better contact conduction, therefore being suitable for use in a combination of TV and telephone as well as with the current cable TV system.

BRIEF DESCRIPTION OF THE DRAWINGS

The drawings disclose an illustrative embodiment of the present invention which serves to exemplify the various advantages and objects thereof, and are as follows:

2

FIG. 1 is a cross section of a conventional connector;

FIG. 2 is a perspective view of the first example of the present invention;

FIG. 3 is a perspective exploded view of the first example of the present invention;

FIG. 4 is a perspective view of the contact component of the first example of the present invention;

FIG. 4A is a partially broken perspective view of the contact component of the first example of the present invention;

FIG. 4B is a cross section view of the first example of the present invention when the contact component join with the thin central wire;

FIG. 4C is a cross section view of the first example of the present invention when the contact component joins with a thick central wire;

FIG. 5 is a sectional view of the assembled first example of the present invention;

FIG. 6 is right side view of the FIG. 5 of the present invention;

FIG. 7 is a perspective view before joining of the connector of the present invention and a coaxial cable;

FIG. 8 is a perspective view of the contact component of the second example of the present invention;

FIG. 9 is a sectional view of the assembled second example of the present invention;

FIG. 10 is a sectional view of the joining component of the third example of the present invention;

FIG. 11 is a sectional view along line 11 of FIG. 10 of the present invention;

FIG. 12 is a sectional view of the joining component of the fourth example of the present invention.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT

As shown in FIG. 2, the first example of the improved connector of a coaxial cable is a female connector on two ends. Also referring to FIG. 3 to FIG. 6, the structure of the present invention includes a body 40 of the connector which includes on the outer surface thereof a hex nut 43. On either side of the hex nut 43 are threaded areas 41 and 42. Inside the connector body 40 is a channel 44 which covered by a pair of insulation components 30. These two insulation components 30 contact the inner surface 35 of the body 40. The interior of each outer end 31 of the insulation components 30 includes a socket 33 that receives a tube-like contact component 20 (see FIG. 4 and FIG. 4A). Each outer end 31 of the insulation component 30 includes a hole 32 (see FIG. 5). The diameter hole 32 is smaller than the inner diameter of contact component 20 so that the contact component 20 is held in place in the insulation component 30.

On the top and bottom of the two ends of the contact component 20 two rectangular holes 21 are punched inward with one holes 21 which do not cut end remaining connected to the contact component 20 so as to form a pair of inclined planes 22 and a cambered surfaces 23 extending toward the interior of the tube. As shown in FIG. 7 and FIG. 7A, the central wire 55 of the male connector 50 of the coaxial cable 5 is inserted into hole 32 so as to contact the cambered surface 23 of the contact component 20. The male connector 50 uses inner thread 51 to screw onto the thread 41 of the body 40 of the female connector 10.

Thus, the end surface 45 of the female connector body 40 will join with the inner surface 52 of the male connector 50.

5,667,409

3

A shown in FIG. 4A, the cambered surface 23 of the contact component is separated by a gap. When the central wire 55 of the coaxial cable is inserted into the connector 20, the two cambered surfaces 23 will open to receive the wire 55.

The insulation component is made from hard plastic material which makes it very easy to insert and to fix the contact component. The materials of the connector are very simple and easy to assemble via automatic mass production. In use, the present invention can reduce power loss greatly and can be used for the various diameters of central wire of the coaxial cable, from 0.5 mm to 1.2 mm (the conventional central wire of coaxial cable is from 0.6 mm to 1.05 mm).

FIG. 8 and FIG. 9 show the second example of the present invention which is a single-end connector. It comprises essentially one side of the above mentioned structure, and also modifies the structure of the contact component 20 slightly. One end of the component 20 includes a pin 25 that passes through the central hole 47 (see FIG. 9) of the closed end 46 of the connector. As the present invention has characteristics of low impedance, low power loss (good match of 75), and high current flow, it will largely improve the electrical characteristic of electrical circuits.

FIG. 10 and FIG. 11 show the third example of the present invention which is another structure of the contact component 20. The two ends of the contact component 20 can be a flat-head shape 26, or the ends can be arced.

As shown in FIG. 12, the fourth example of the present invention is another structure of the contact component 20 that includes open holes 21 near the four sides (top, bottom, right and left) of the two ends of the contact component 20. In this embodiment, the holes 21 each form an inclined plane 22 and a cambered surface 23.

According to the above examples, the connector for a coaxial cable of the present invention comprises three components with very simple structure that can be easily assembled. The present invention can use automatic assembly to reduce the failure rate.

With the fourth embodiment, the operating characteristic of appliances can be improved because there is no longer

4

point contact, but rather a line contact (thick central wire, FIG. 4C) or a surface contact (thin central wire, FIG. 4B). The line contact at least has four lines for contact which provides a better connection structure than conventional connectors. The line contact has less power and can be used for a larger range of central wire diameter (0.5 mm to 1.2 mm) which allows larger current flow is safer for use, is low cost, and is a very practical product.

Many changes and modifications in the above described embodiment of the invention can, of course, be carried out without departing from the scope thereof. Accordingly, to promote progress in science and the useful arts, the invention is disclosed and is intended to be limited only by the scope of the appended claims.

What is claimed is:

1. A connector for a coaxial cable comprising:

a connector body with a channel therein,

a pair of cylindrical insulation components that cover an interior of said connector body, each said insulation component includes a socket in an outer end thereof,

a tubular contact component with a plurality of holes punched inward such that one end of material punched inward remains connected to said contact component, thereby forming an inclined plane and a cambered surface; such that

pairs of said inclined planes and said cambered surfaces form at least one partially closed opening to receive a central wire of the coaxial cable, said opening is circular in shape and provides a planar contact surface for said central wire.

2. The connector as claimed in claim 1 wherein: ends of said contact component are circular.

3. The connector as claimed in claim 1 wherein: ends of said contact component are flat on two opposing sides.

4. The connector as claimed in claim 1 wherein: one end of said connector body includes a pin.

AFTER COMPLETING THE FRONT SIDE OF FORM CV-71, COMPLETE THE INFORMATION REQUESTED BELOW.

VIII(a). IDENTICAL CASES: Has this action been previously filed in this court and dismissed, remanded or closed? No Yes
 If yes, list case number(s): _____

VIII(b). RELATED CASES: Have any cases been previously filed in this court that are related to the present case? No Yes
 If yes, list case number(s): _____

Civil cases are deemed related if a previously filed case and the present case:

- (Check all boxes that apply) A. Arise from the same or closely related transactions, happenings, or events; or
 B. Call for determination of the same or substantially related or similar questions of law and fact; or
 C. For other reasons would entail substantial duplication of labor if heard by different judges; or
 D. Involve the same patent, trademark or copyright, and one of the factors identified above in a, b or c also is present.

IX. VENUE: (When completing the following information, use an additional sheet if necessary.)

(a) List the County in this District; California County outside of this District; State if other than California; or Foreign Country, in which EACH named plaintiff resides.
 Check here if the government, its agencies or employees is a named plaintiff. If this box is checked, go to item (b).

County in this District:*	California County outside of this District; State, if other than California; or Foreign Country
Ventura (Holland Electronics, LLC)	Taiwan (Shen-Chia Wong) Taiwan (Cheng Sun Lan)

(b) List the County in this District; California County outside of this District; State if other than California; or Foreign Country, in which EACH named defendant resides.
 Check here if the government, its agencies or employees is a named defendant. If this box is checked, go to item (c).

County in this District:*	California County outside of this District; State, if other than California; or Foreign Country
	Taiwan (Wistron Corporation) Texas (Wistron Infocomm [Texas] Corporation) Texas (Wistron Infocomm Technology [America] Corporation)

(c) List the County in this District; California County outside of this District; State if other than California; or Foreign Country, in which EACH claim arose.
Note: In land condemnation cases, use the location of the tract of land involved.

County in this District:*	California County outside of this District; State, if other than California; or Foreign Country
Los Angeles	

* Los Angeles, Orange, San Bernardino, Riverside, Ventura, Santa Barbara, or San Luis Obispo Counties
Note: In land condemnation cases, use the location of the tract of land involved.

X. SIGNATURE OF ATTORNEY (OR PRO PER): Paul D. Blumenthal Date March 11, 2011

Notice to Counsel/Parties: The CV-71 (JS-44) Civil Cover Sheet and the information contained herein neither replace nor supplement the filing and service of pleadings or other papers as required by law.
